

Coal Creek Family medicine is not yet able to offer vaccinations for COVID19 but strongly encourage our patients to receive the vaccine if given the opportunity.

We are currently applying through the Colorado Department of Public Health & Environment to be able to offer this service to our patients and we anticipate we may be able to offer the vaccine as the immunization process enters Phase 2 of delivery. When we can deliver the vaccine, we will follow CDC and CDPH guidelines to ensure equitable delivery of the vaccines to the community. We are currently developing our workflows and devising the best methods of communication with our large population of patients. Please visit this site for updates and additional information as it becomes available.

Coal Creek Family Medicine is happy to offer our patients a variety of COVID 19 testing options based on a patient's specific circumstances. We offer testing through our car visit system to ensure minimal exposure for our providers and other patients.

Testing is by appointment only and requires assessment by one of our medical providers so that they can ensure appropriate testing is selected and results are delivered timely and accurately.

For additional information or to schedule an appointment for testing please call (303) 666-7119
